# Wiring Diagram

## **NOTE:** You can repeat this setup up to 5 tubes per Universe.

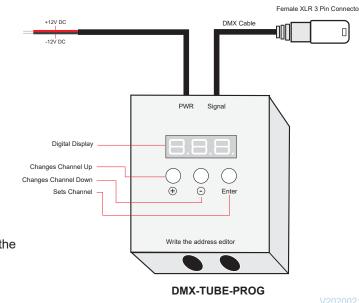

Madrix Interface

PC

# **NOTES**

- The DMX-TUBE-6432 works by connecting a series of them in a, daisy chain.
- They are manually addressed using an external addressing device (DMX-TUBE-PROG).
- The initial DMX signal is acquired by connecting one initial T cable (part number: LED-PIXEL-T-INI-DMX) which provides the main DMX signal input as well as the main 12V DC power input.
- After the initial T Cable, the subsequent cables needed to daisy chain the vert tubes are the LED-PIXEL-T-PW which do not have the DMX connector.
- It is always best to power each 5 tube line that you may have created using the vert tubes from both sides of the line using 2 power supplies (12V 400W each), this will decrease voltage drop and keep everything evenly lit.
- You can have up to 5 Vert Tubes per universe.
- After the first 5 tubes, a new universe will need to be created.
